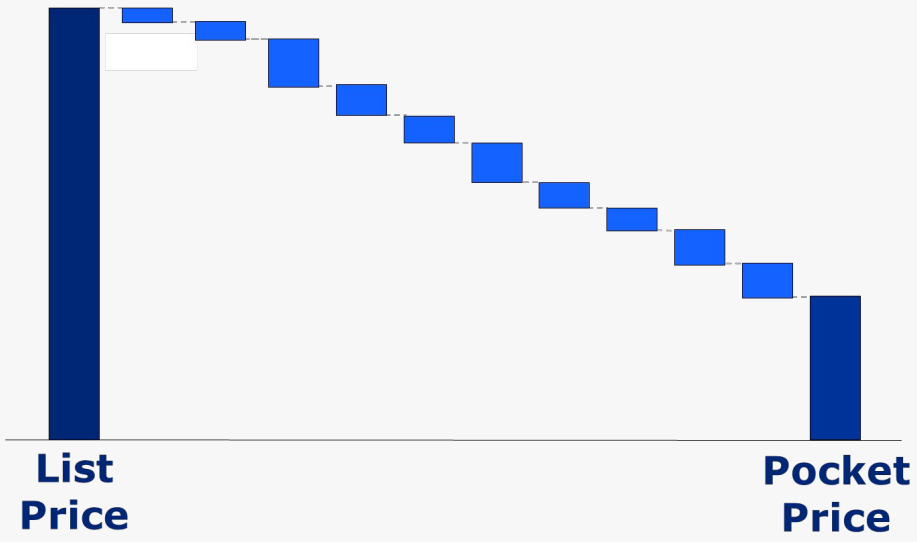
Pricing Strategies Training & Templates

By Ex-Deloitte, BCG & McKinsey Consultants



Agenda

Step 1: Increase your Pricing background knowledge

- Why Pricing is critical?
- Key figures to know
- Key issues caused by ineffective Pricing management
- Root causes of pricing issues
- Estimated benefits of a Pricing management project
- Key consulting firms providing Pricing Management services
- Key questions Senior executives need to answer

Step 2: Define the pricing maturity level of your business

1. Create a pricing maturity model
2. Identify your current pricing maturity level
3. Define your target pricing maturity level
4. Design a roadmap to go from your current state to your target state

Step 3: Define your Pricing Strategy

1. Set up your Pricing Goal
2. Define key methods to reach your Goal and set up your list price
3. Apply discount to your list price

Step 4: Make sure you avoid price war

Additional reusable Powerpoint templates

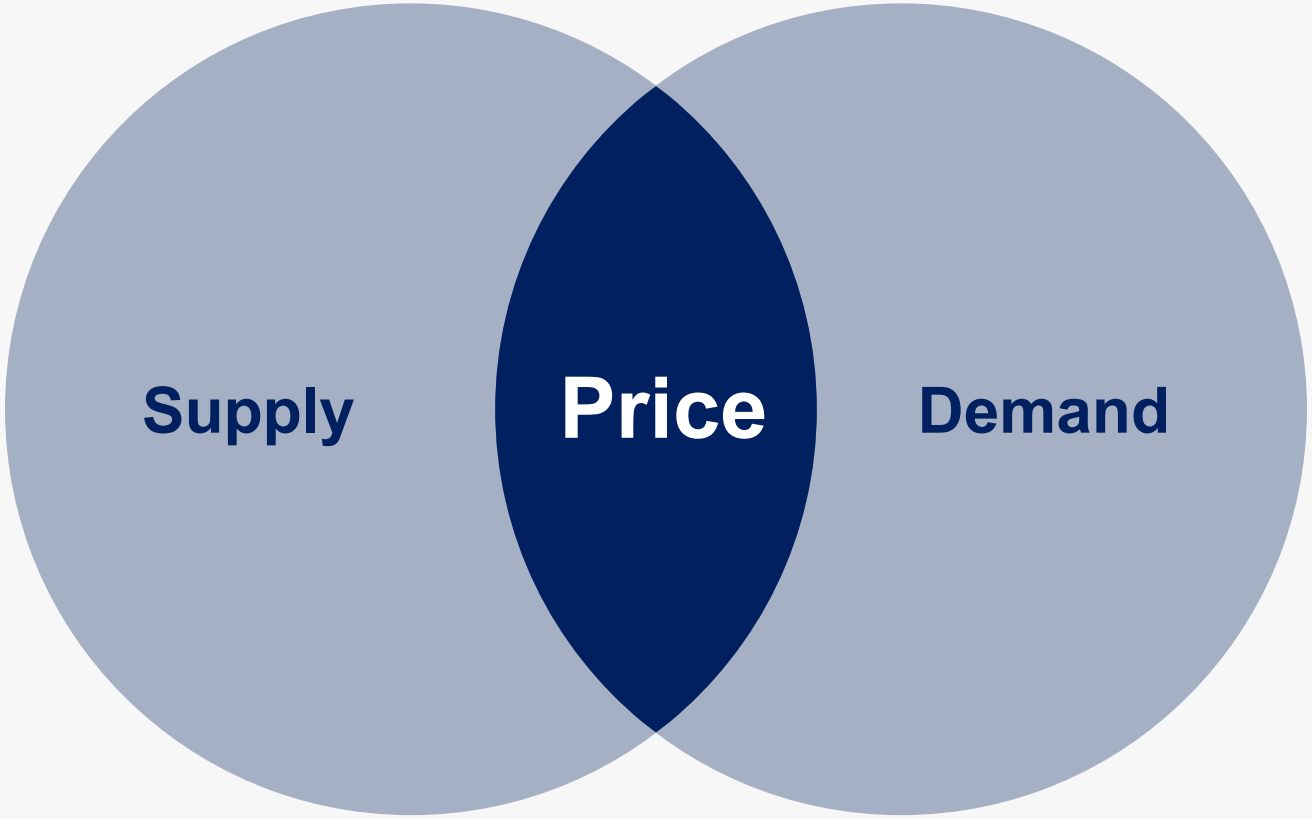
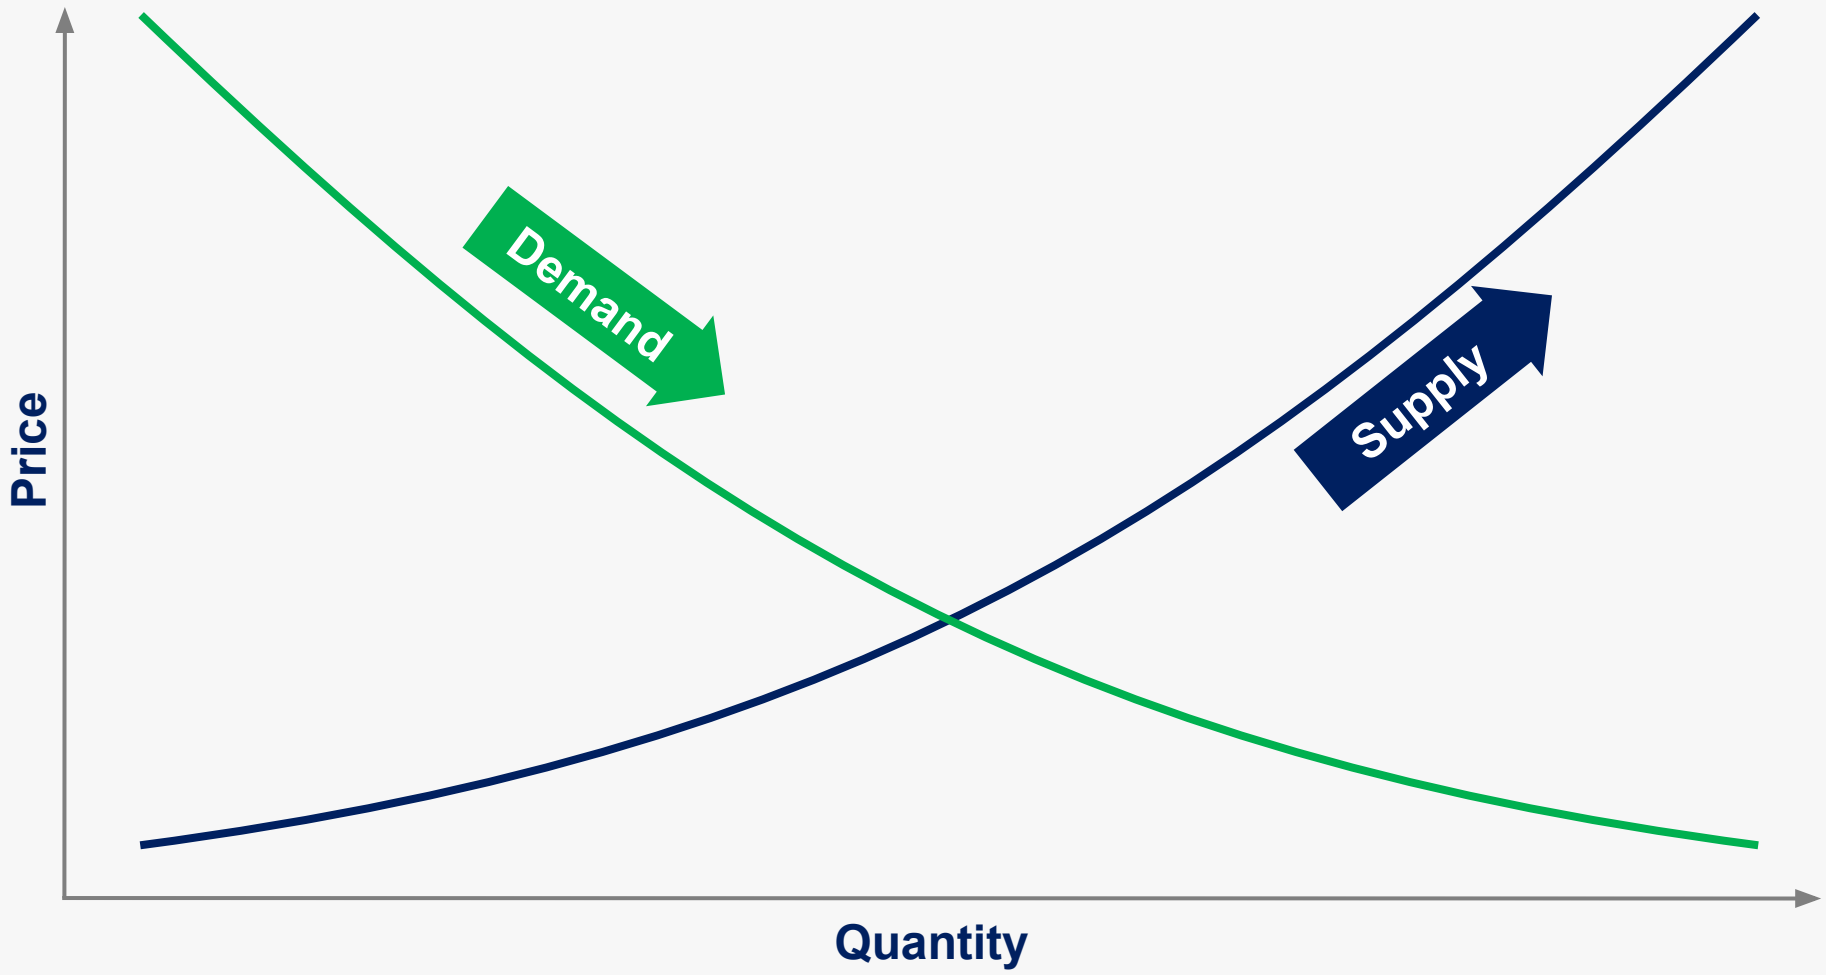
Price is the fundamental interaction point between supply and demand



Price impacts both Demand and Supply



Key figures

3%

Companies effectively managing, communicating, and enforcing prices today

300%

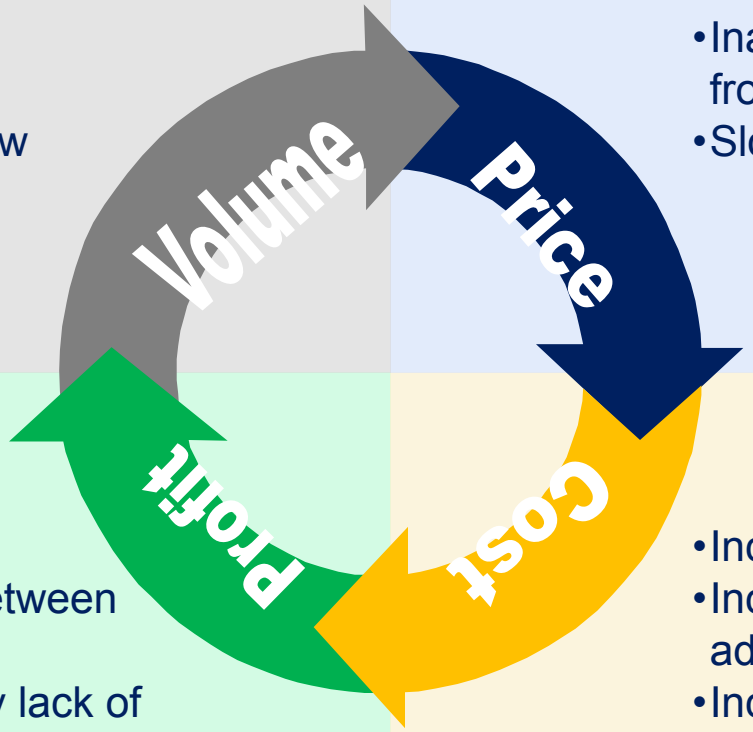
Average ROI of a 3 to 6 months pricing management project carried out by a tier-one consulting firm

Source: Kiewell and Roegner

Ineffective pricing management will cause many issues

- Lost market share
- Excess / obsolete inventory
- Low volume for new products

- Wide price bands
- Inaccurate quotations from field sales
- Slow response to RFPs

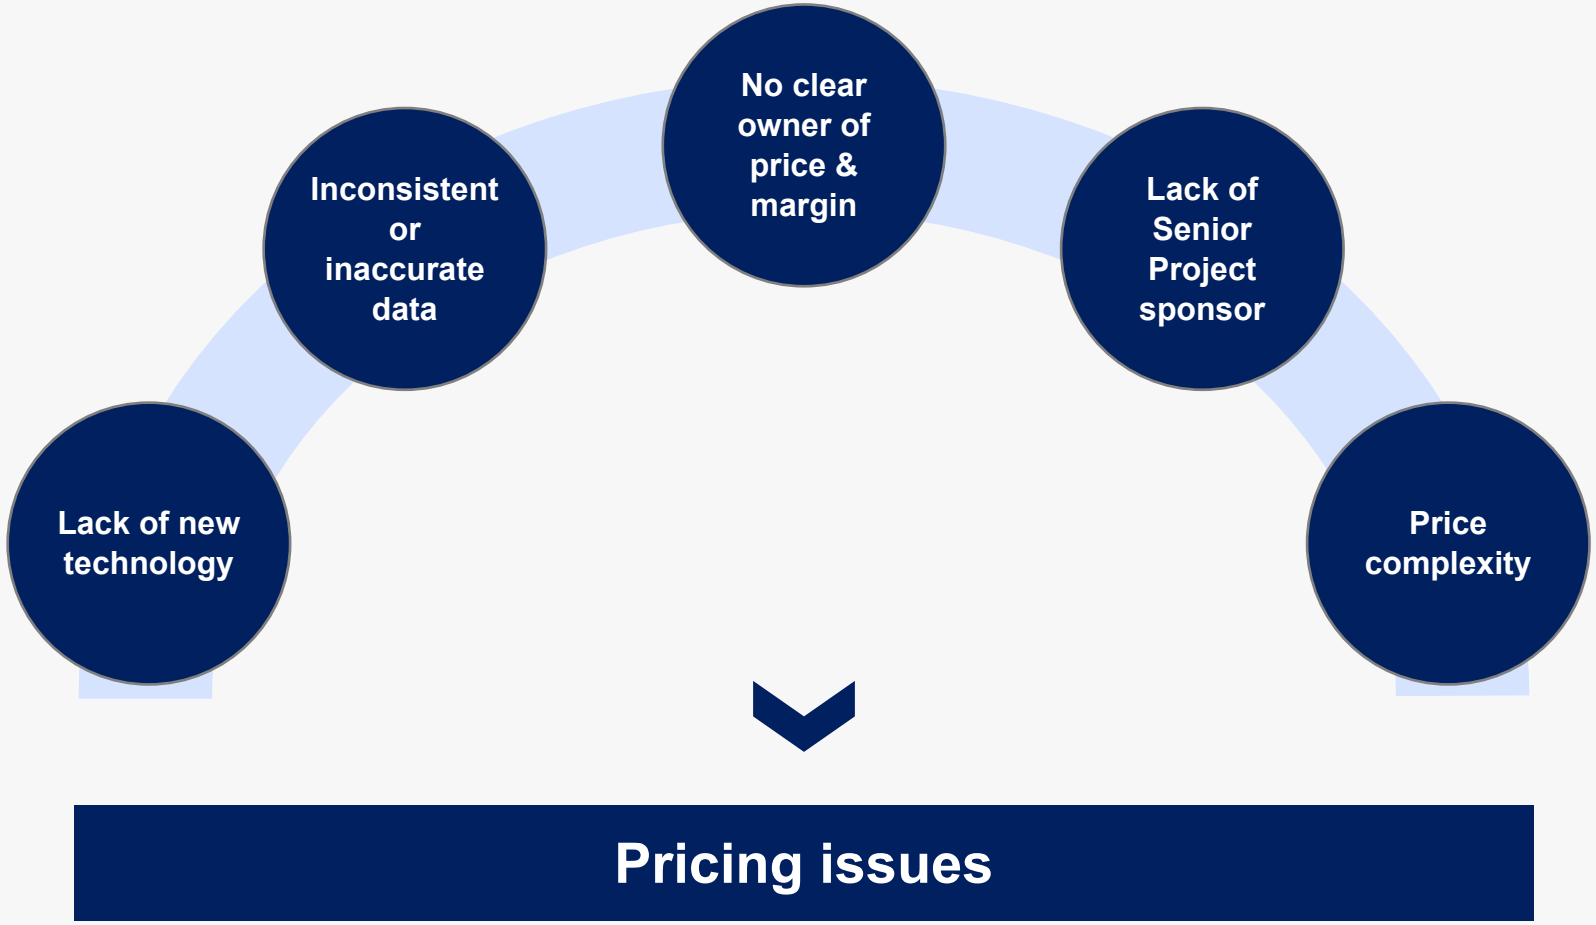


- Declining margins
- Little correlation between volume and price
- Product profitability lack of visibility

- Increased service costs
- Increased price administration costs
- Increased receivables write-offs

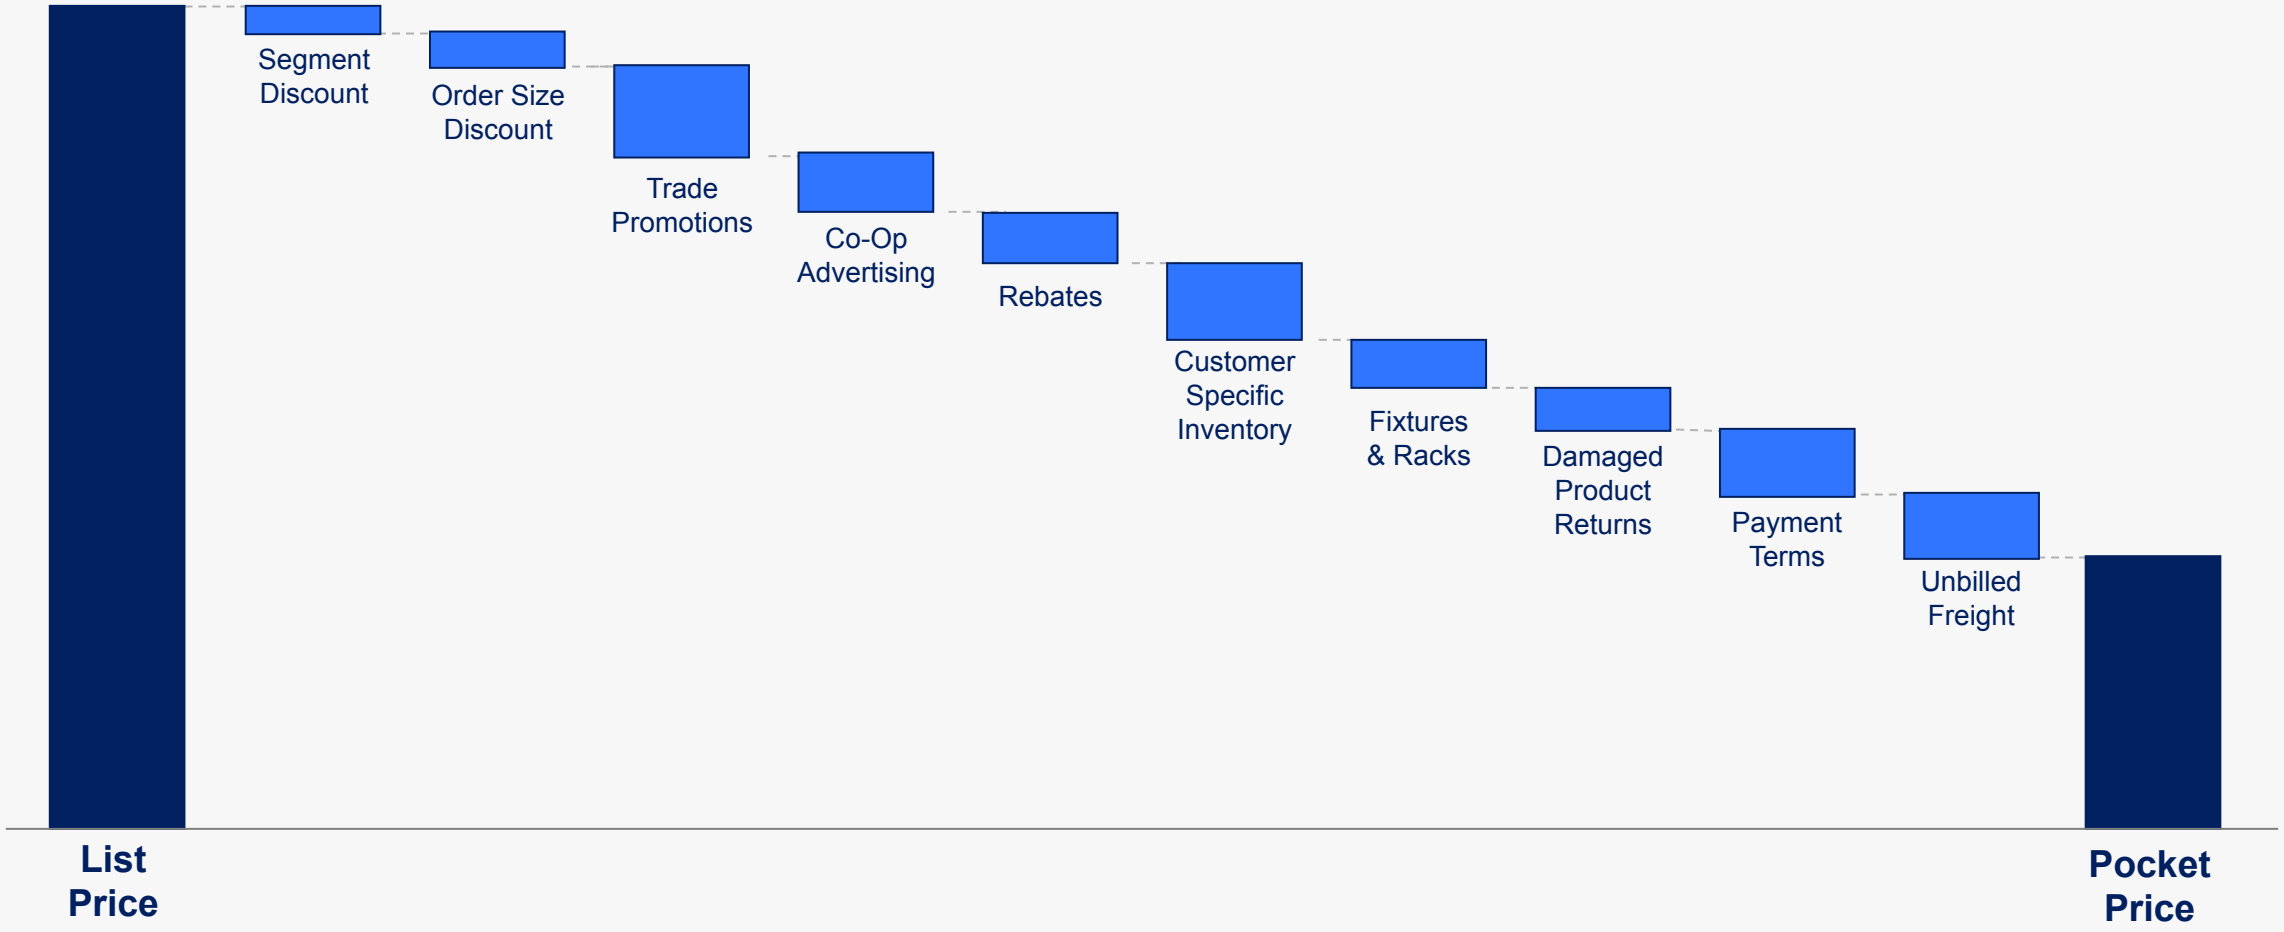
Source: Kiewell and Roegner

There are key common root causes of pricing issues



Source: Kiewell and Roegner

A listing price can be break down in multiple components



A listing price can be break down in multiple components

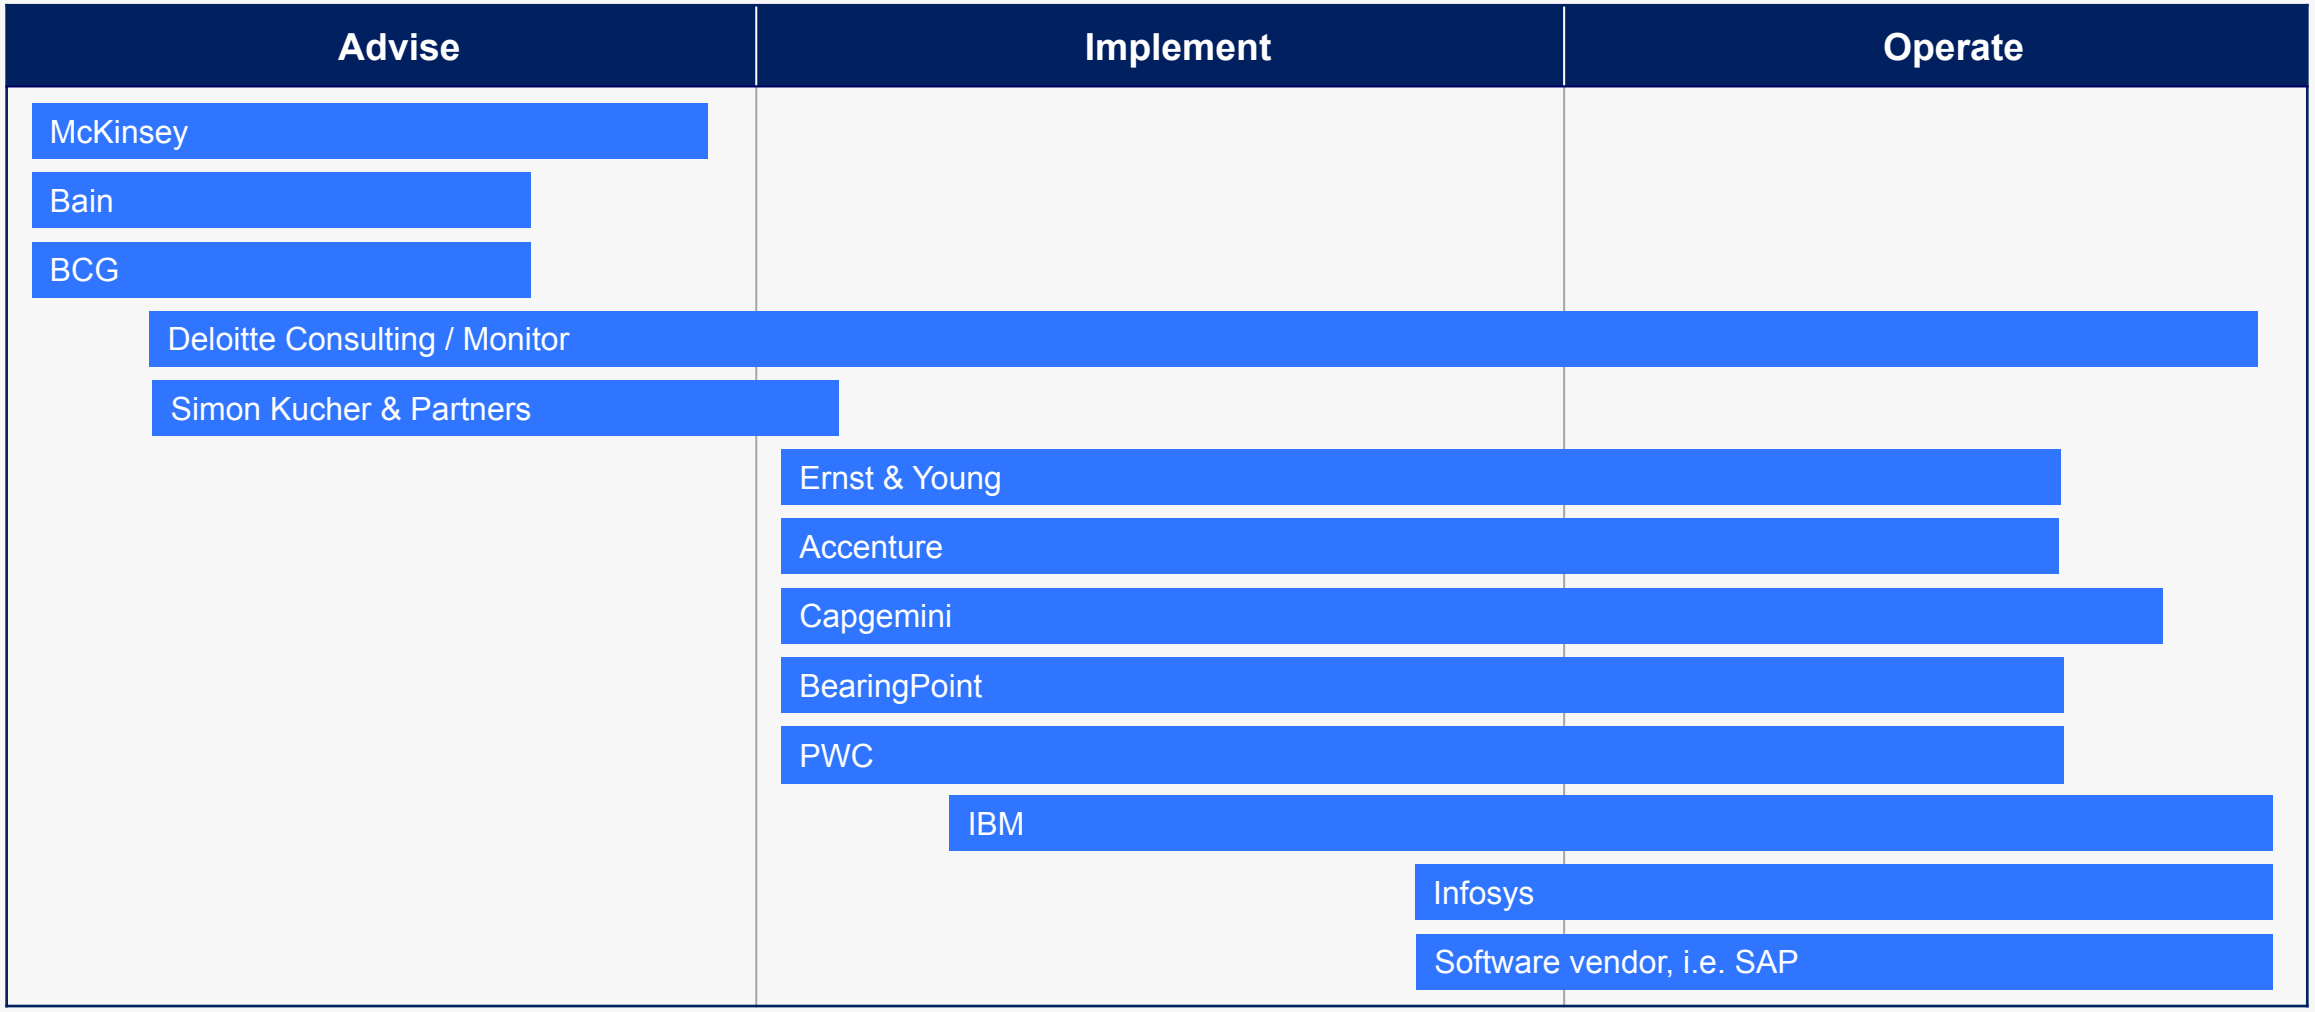
A dozen Consulting Firms provide Pricing Management services



In his latest white paper, BCG identified 3 key questions Senior executives need to answer

Do you have a pricing governance body at the top of each division of the company?	In best-practice companies, senior management chairs a pricing committee accountable for defining and managing the pricing policy, with a focus on the tradeoff between margin and volume. It includes all key functions, including sales, marketing, finance, sourcing, and operations, and meets at least monthly.
Does a pricing team prepare the data needed for decision making by the committee?	Best-practice companies effectively consolidate the information, derive the implications, and “operationalize” them into price changes.
Do you know more than your competitors about your customers’ response to pricing?	Best-practice companies capitalize on and codify customer knowledge so they can price more astutely. An understanding of what customers value most, how their economics work, and how they will respond to price changes can be developed through advanced customer-exploration techniques.

Agenda

Create a simple Pricing maturity model

Example of a Pricing maturity model

	Basic	Standard	Advanced	Leading
Level	1	2	3	4
Percentage of Companies	20%	70%	10%	<1%
Description	• Cost-plus or margin-based pricing • No pricing market analysis • No pricing competitive analysis • Barely any pricing data • No resources exclusively allocated to pricing management • No forward-thinking pricing strategy	• Prices respond to key market factors or inventory-driven lifecycle • Limited pricing market analysis • Limited pricing competitive analysis • Limited pricing data • A small dedicated team allocated to pricing management • Limited forward-thinking pricing strategy	• Context-driven and managed life-cycle pricing • Robust pricing market analysis • Robust pricing competitive analysis • Comprehensive pricing data • A dedicated team allocated to pricing management • Good forward-thinking pricing strategy	• Pricing based on predicted demand • Heavy pricing analytics coupled with clear execution accountability • Sophisticated pricing strategy involving multiple internal and external factors with a desire to test and learn • Anticipation of competitors reaction • Excellent forward-thinking pricing strategy

Identify your current pricing maturity level

Current pricing maturity level

	Basic	Standard	Advanced	Leading
Level	1	2	3	4
Percentage of Companies	20%	70%	10%	<1%
Description	• Cost-plus or margin-based pricing • No pricing market analysis • No pricing competitive analysis • Barely any pricing data • No resources exclusively allocated to pricing management • No forward-thinking pricing strategy	• Prices respond to key market factors or inventory-driven lifecycle • Limited pricing market analysis • Limited pricing competitive analysis • Limited pricing data • A small dedicated team allocated to pricing management • Limited forward-thinking pricing strategy	• Context-driven and managed life-cycle pricing • Robust pricing market analysis • Robust pricing competitive analysis • Comprehensive pricing data • A dedicated team allocated to pricing management • Good forward-thinking pricing strategy	• Pricing based on predicted demand • Heavy pricing analytics coupled with clear execution accountability • Sophisticated pricing strategy involving multiple internal and external factors with a desire to test and learn • Anticipation of competitors reaction • Excellent forward-thinking pricing strategy

Identify your target pricing maturity level

Target pricing maturity level

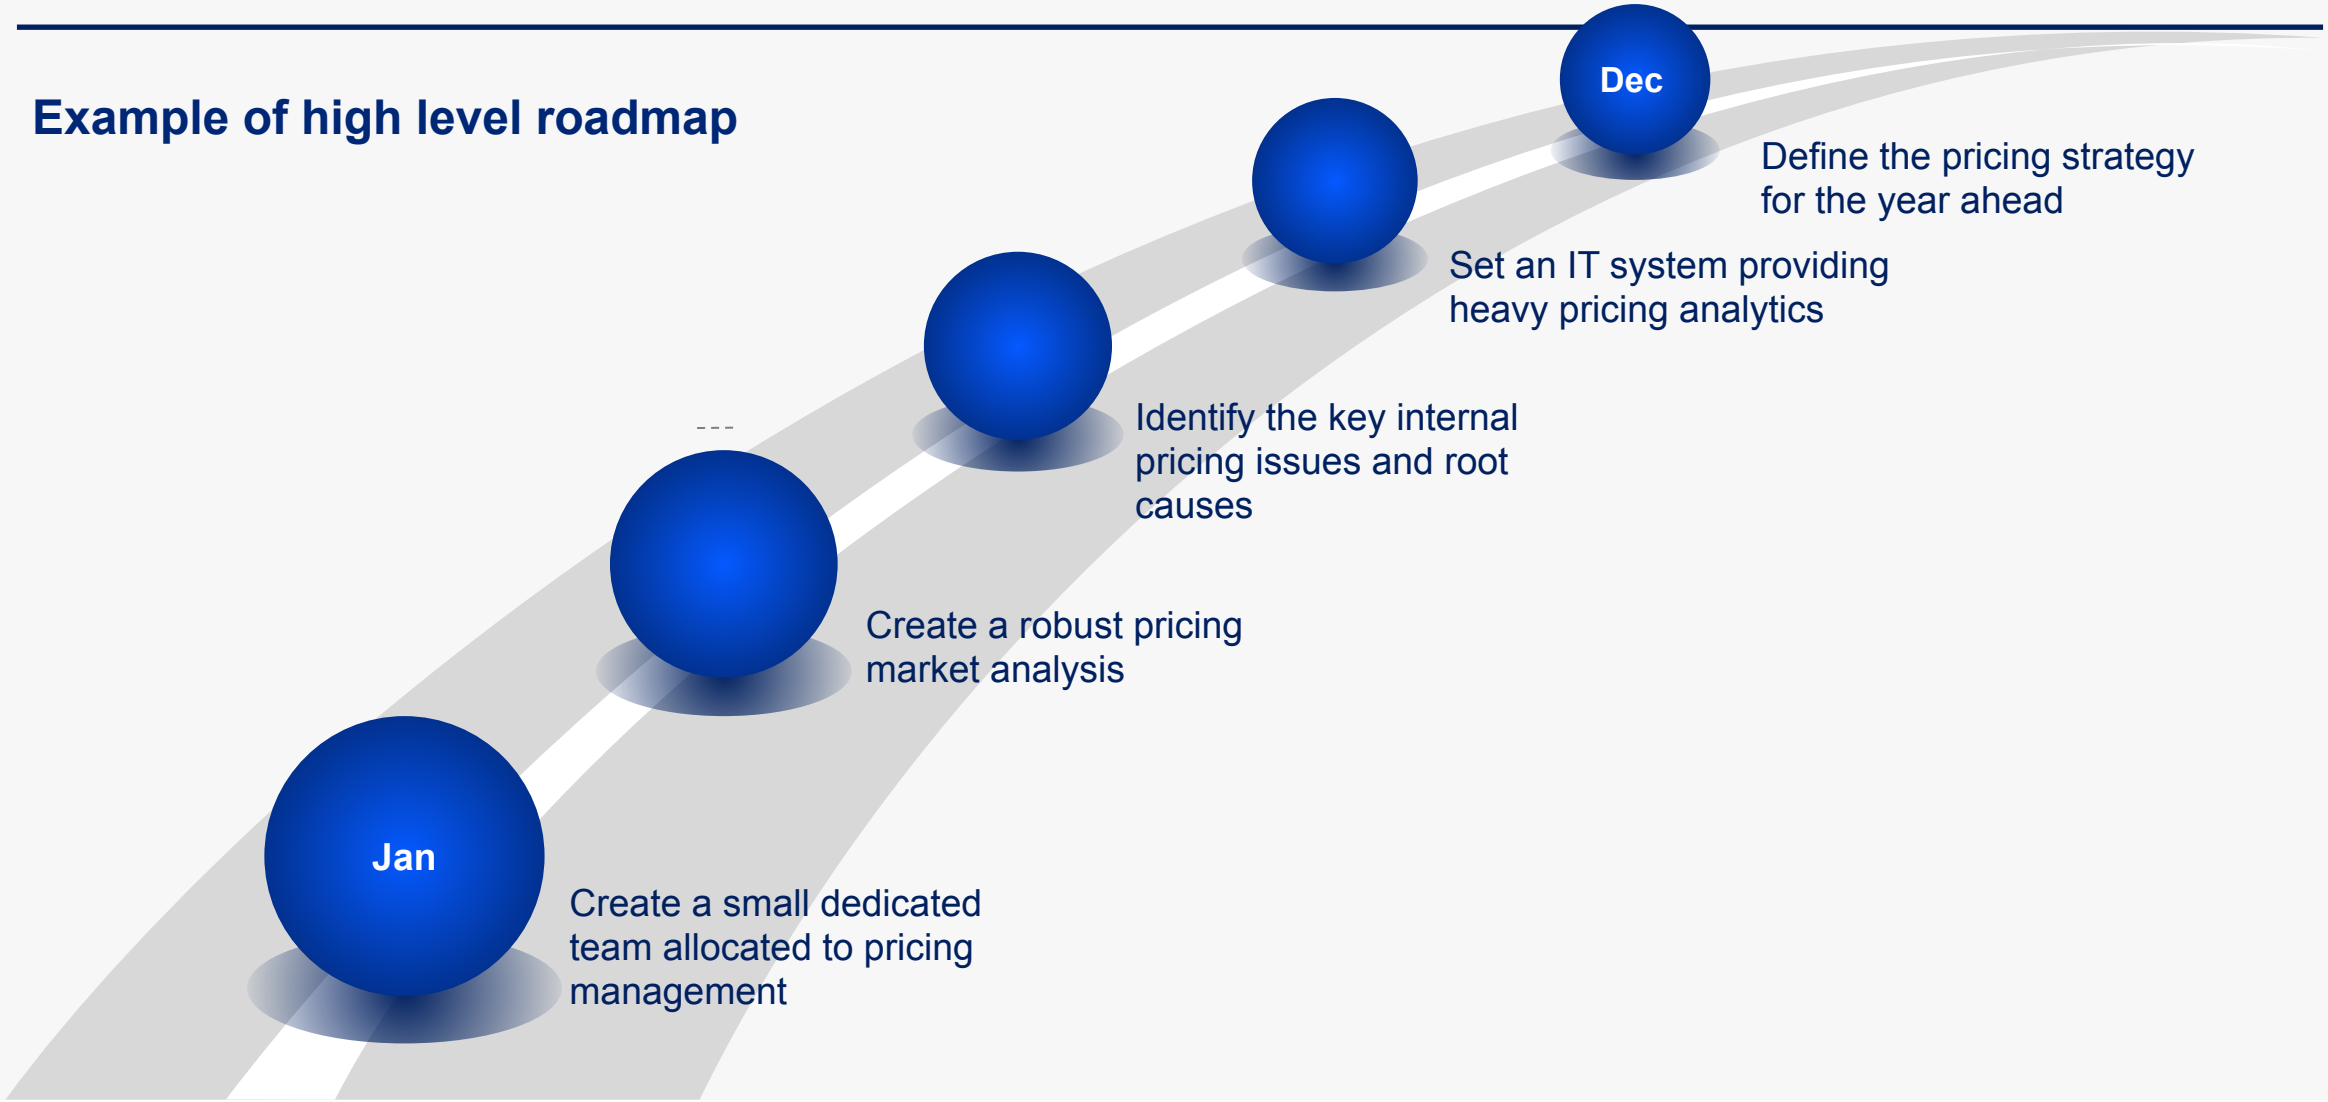
Identify a roadmap to go from your current state to you target state

Example of high level roadmap



Agenda

Step 1: Increase your Pricing background knowledge

- Why Pricing is critical?
- Key figures to know
- Key issues caused by ineffective Pricing management
- Root causes of pricing issues
- Estimated benefits of a Pricing management project
- Key consulting firms providing Pricing Management services
- Key questions Senior executives need to answer

Step 2: Define the pricing maturity level of your business

1. Create a pricing maturity model
2. Identify your current pricing maturity level
3. Define your target pricing maturity level
4. Design a roadmap to go from your current state to your target state

Step 3: Define your Pricing Strategy

1. Set up your Pricing Goal
2. Define key methods to reach your Goal and set up your list price
3. Apply discount to your list price

Step 4: Make sure you avoid price war

Additional reusable Powerpoint templates

Companies usually pursue either a Skim Pricing goal or a Penetration Pricing goal

1

Skim Pricing

Skim pricing attempts to "skim the cream" off the top of the market by setting a high price and selling to those customers who are less price sensitive. Skimming is a strategy used to pursue the objective of profit margin maximization.

Source: Joel Dean HBR article entitled, Pricing Policies

Companies usually pursue either a Skim Pricing goal or a Penetration Pricing goal

1

Skim Pricing

Skim pricing attempts to "skim the cream" off the top of the market by setting a high price and selling to those customers who are less price sensitive. Skimming is a strategy used to pursue the objective of profit margin maximization.

2

Penetration Pricing

Penetration pricing pursues the objective of quantity maximization by means of a low price.

Source: Joel Dean HBR article entitled, Pricing Policies

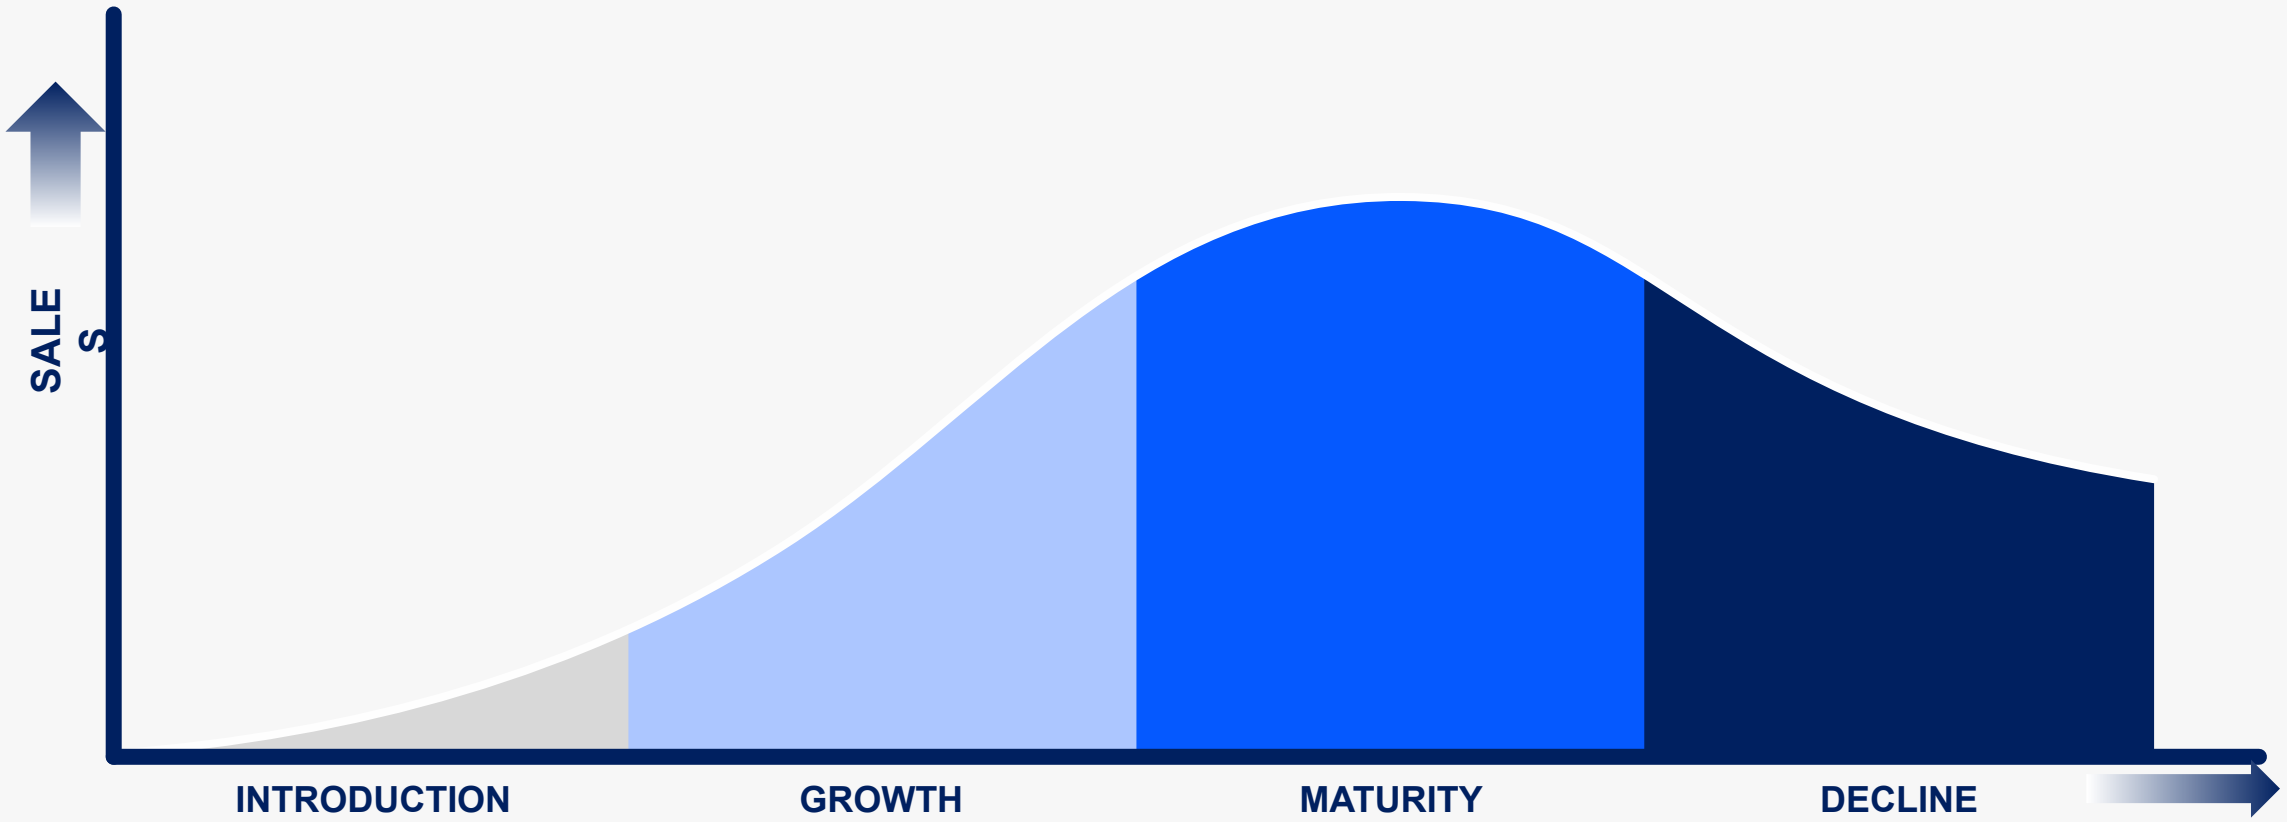
A Skim Pricing goal is more appropriate when:

- Demand is expected to be relatively inelastic; that is, the customers are not highly price sensitive.
- Large cost savings are not expected at high volumes, or it is difficult to predict the cost savings that would be achieved at high volume.
- The company does not have the resources to finance the large capital expenditures necessary for high volume production with initially low profit margins.

A Penetration Pricing goal is more appropriate when:

- Demand is expected to be highly elastic; that is, customers are price sensitive and the quantity demanded will increase significantly as price declines.
- Large decreases in cost are expected as cumulative volume increases.
- The product is of the nature of something that can gain mass appeal fairly quickly.
- There is a threat of impending competition.

To help you define your goal, it is important to identify where your product(s) is on the product lifecycle



To help you define your goal, it is important to identify where your product(s) is on the product lifecycle

- The customers who buy products in the “Introduction” phase are called “Innovators”
- These people buy new products with the belief that sooner or later these new products will significantly improve our lives
- They are also known as technology enthusiasts, or “techies”
- They represents 2.5% of the market

- The customers who buy products in the “Growth” phase are called “Early adopters”
- These people are often considered to be visionaries or revolutionaries, who want to use the discontinuity of any innovation to break from the past into a new future
- They represents 13.5% of the market

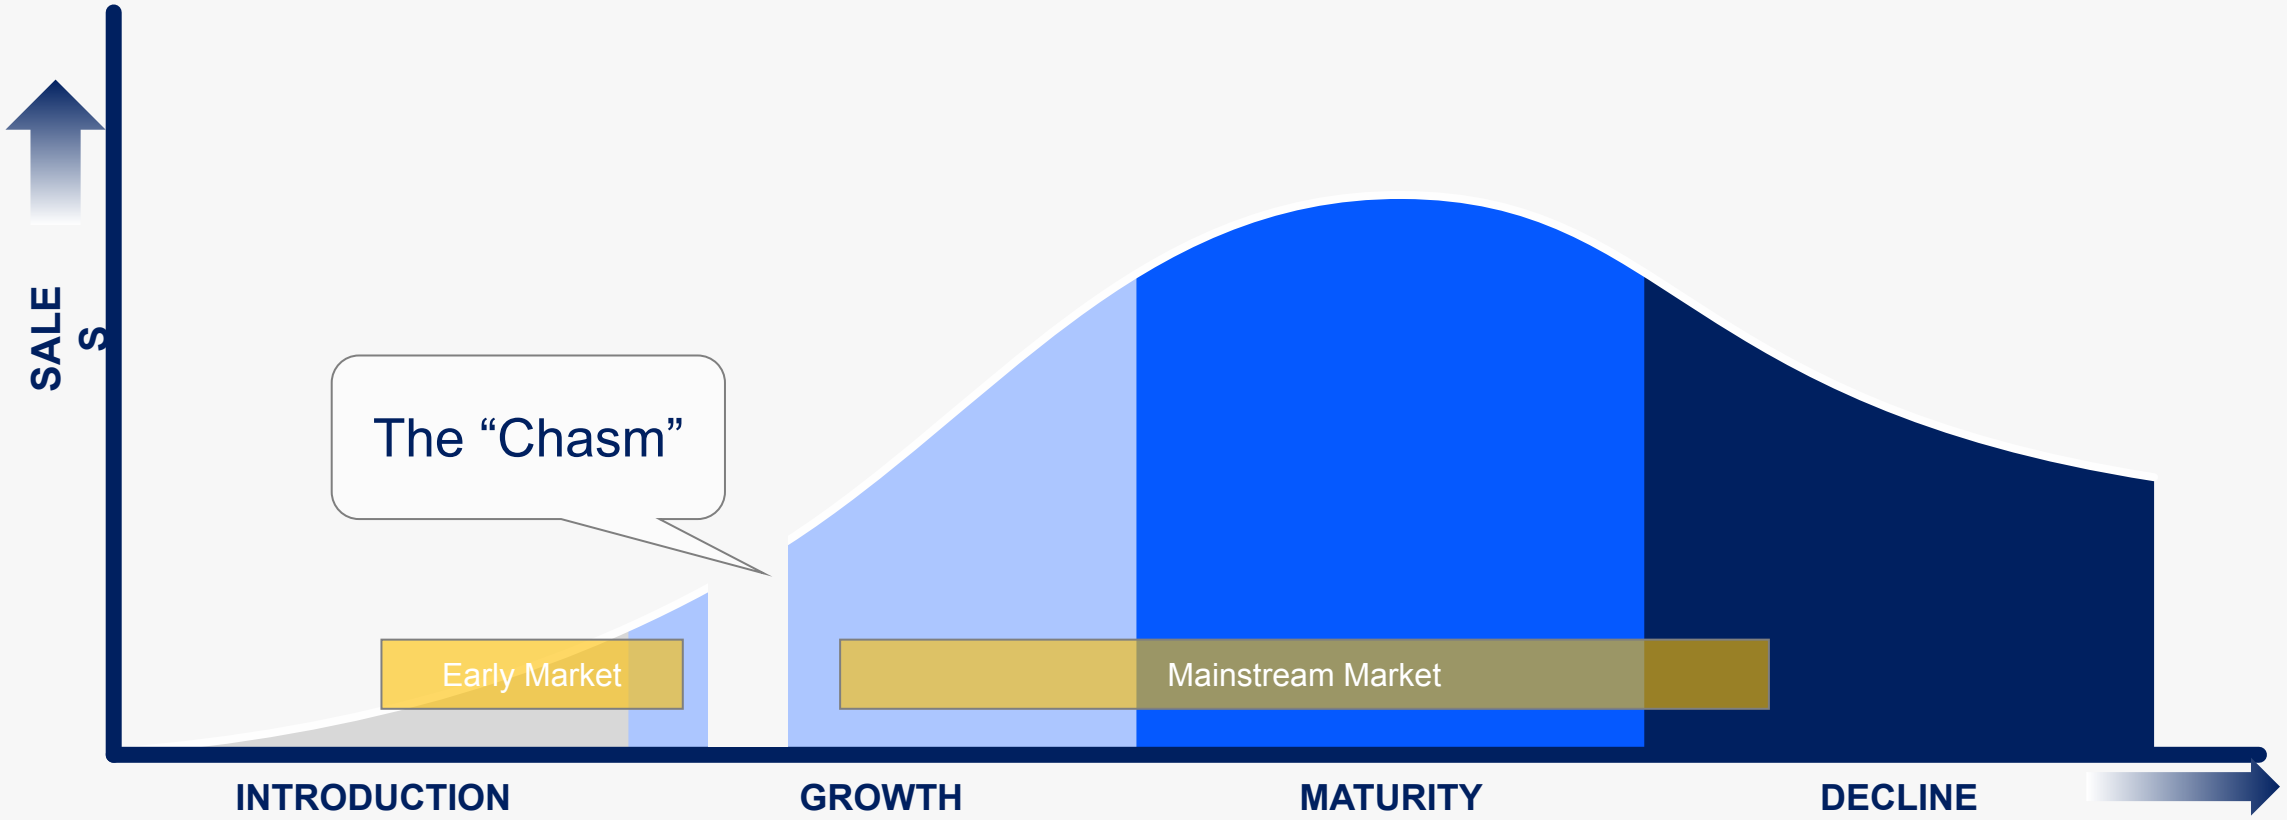
- The customers who buy products in the “Maturity” phase are called “Early majority”
- These people are often considered to be pragmatists, who will only adopt a new product after a proven track record
- They represents 34% of the market

- The customers who buy products in the “Decline” phase are called “Late majority”
- These people are often considered to be conservatives, who are very price sensitive, skeptical, and demanding
- They represents 34% of the market

Source of inspiration: Moore and McKenna

It is said there is a “chasm” to overcome in the “Growth” phase

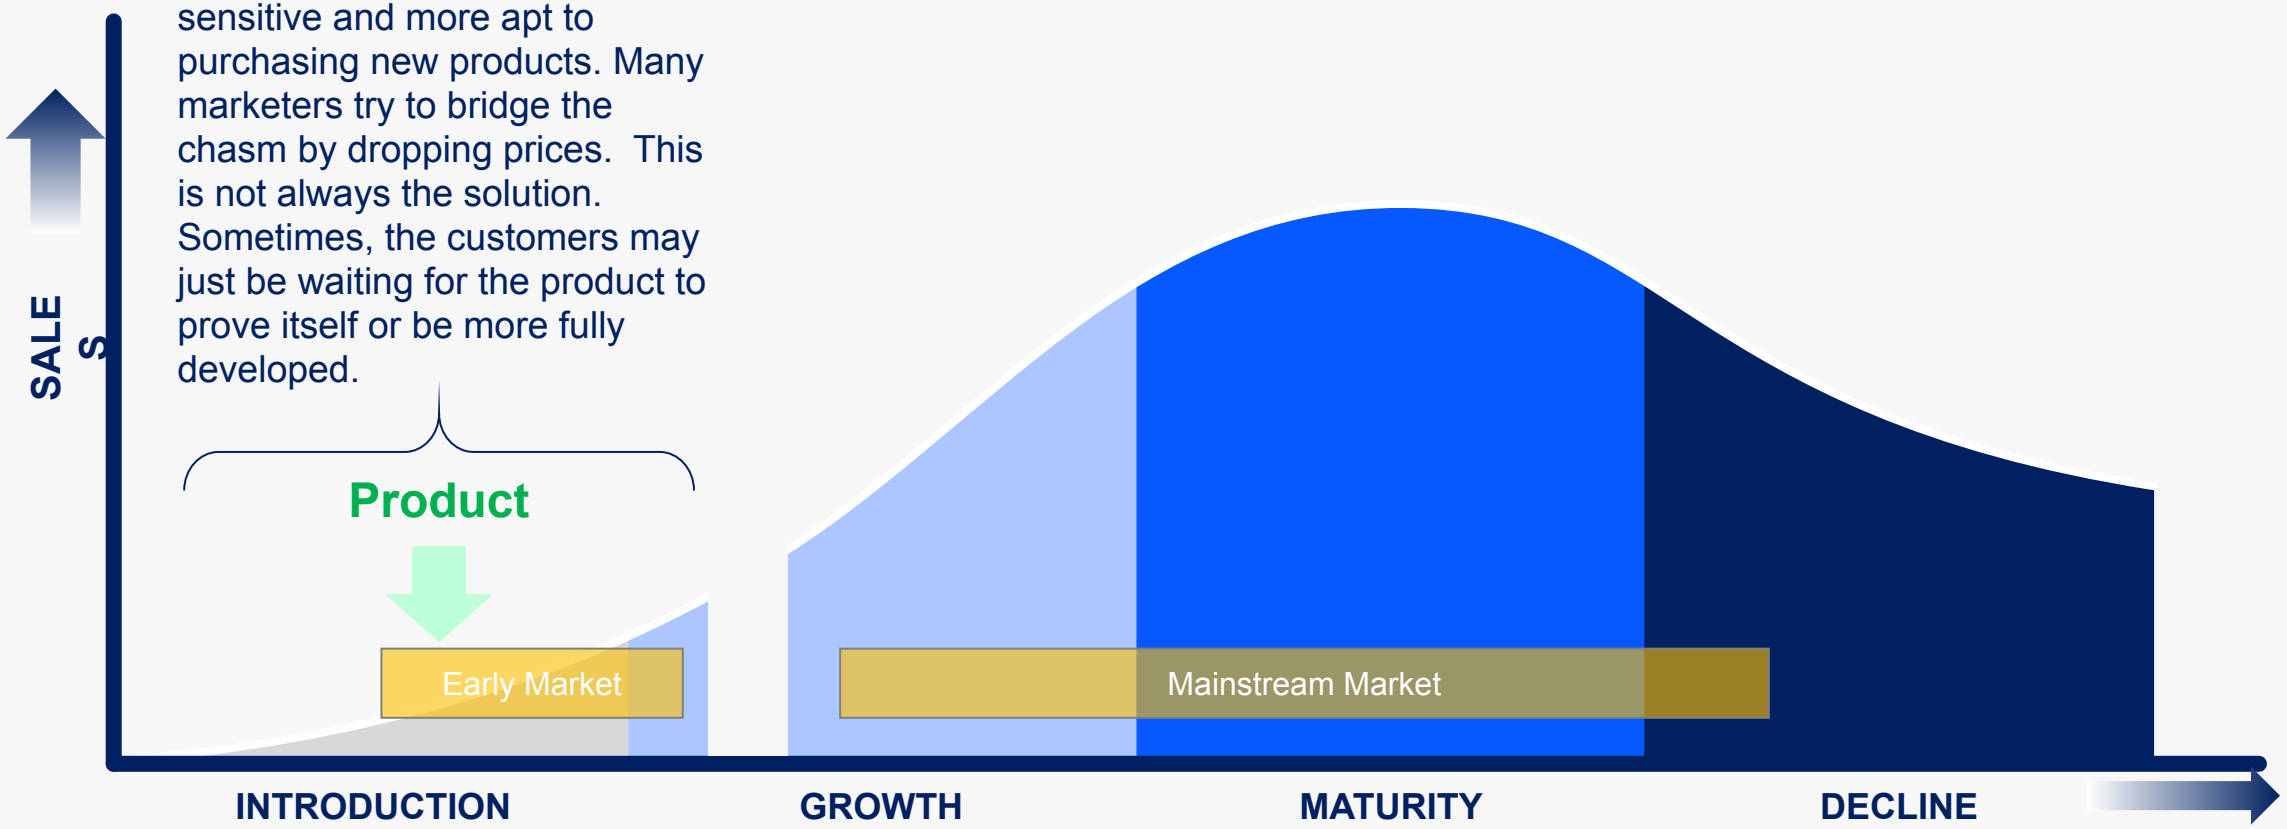
This “chiasm” is a threshold that many new products fail to cross. Many new product are successful in selling to the Early Market. However, they never achieve the critical mass needed for mass consumer adoption. It is usually said that these products fell into a chasm.



Source of inspiration: Moore and McKenna

Companies usually pursue a Skim Pricing goal when their products is positioned before the “chasm”

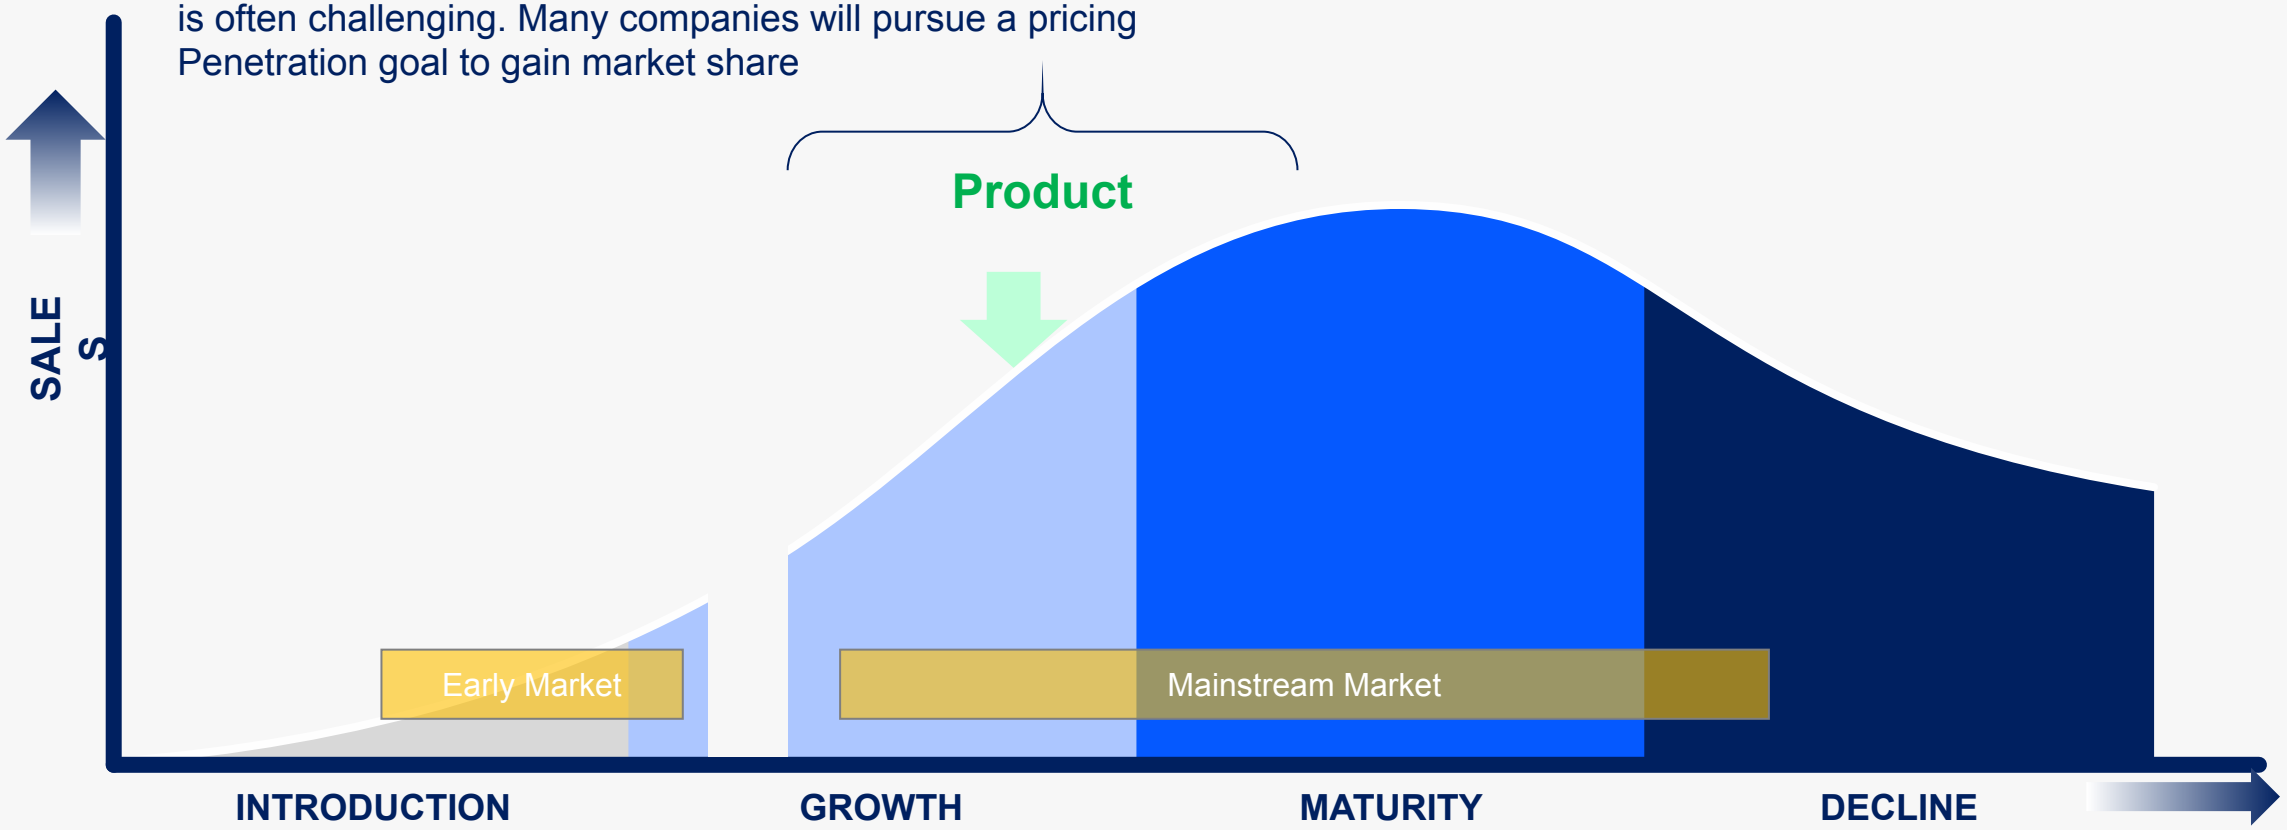
A Skim Pricing goal is often more suitable because the initial buyers are not as price sensitive and more apt to purchasing new products. Many marketers try to bridge the chasm by dropping prices. This is not always the solution. Sometimes, the customers may just be waiting for the product to prove itself or be more fully developed.



Source of inspiration: Moore and McKenna

Companies usually pursue a Penetration Pricing goal when their products is positioned after the “chasm”

A Penetration Pricing goal is often adopted as the new product is about to reach the Mainstream Market. New companies often start to enter the market and the race to become market leader is often challenging. Many companies will pursue a pricing Penetration goal to gain market share



Source of inspiration: Moore and McKenna

Please see below a more comprehensive list of goals that you can select for your product

Current profit maximization	Current revenue maximization	Maximize quantity	Maximize profit margin
Quality leadership	Partial cost recovery	Survival	Status quo

Please see below a more comprehensive list of goals that you can select for your product

Seeks to maximize current profit, taking into account of revenue and costs. Current profit maximization may not be the best objective if it results in lower long-term profits

Current profit maximization	**Current revenue maximization**	**Maximize quantity**	**Maximize profit margin**
Quality leadership	**Partial cost recovery**	**Survival**	**Status quo**

Please see below a more comprehensive list of goals that you can select for your product

Seeks to maximize current revenue with no regard to profit margins. The underlying objective often is to maximize long-term profits by increasing market share and lowering costs

Current profit maximization	**Current revenue maximization**	**Maximize quantity**	**Maximize profit margin**
Quality leadership	**Partial cost recovery**	**Survival**	**Status quo**

Please see below a more comprehensive list of goals that you can select for your product

Seeks to maximize the number of units sold or the number of customers served in order to decrease long-term costs as predicted by the experience curve

Current profit maximization	**Current revenue maximization**	**Maximize quantity**	**Maximize profit margin**
Quality leadership	**Partial cost recovery**	**Survival**	**Status quo**

Please see below a more comprehensive list of goals that you can select for your product

Attempts to maximize the unit profit margin, recognizing that quantities will be low

Current profit maximization	**Current revenue maximization**	**Maximize quantity**	**Maximize profit margin**
Quality leadership	**Partial cost recovery**	**Survival**	**Status quo**

Please see below a more comprehensive list of goals that you can select for your product

Current profit maximization	Current revenue maximization	Maximize quantity	Maximize profit margin
Quality leadership	Partial cost recovery	Survival	Status quo

Use price to signal high quality in an attempt to position the product as the quality leader

Please see below a more comprehensive list of goals that you can select for your product

Current profit maximization	Current revenue maximization	Maximize quantity	Maximize profit margin
Quality leadership	**Partial cost recovery**	Survival	Status quo

An organization that has other revenue sources may seek only partial cost recovery

Please see below a more comprehensive list of goals that you can select for your product

Current profit maximization	Current revenue maximization	Maximize quantity	Maximize profit margin
Quality leadership	Partial cost recovery	**Survival**	Status quo

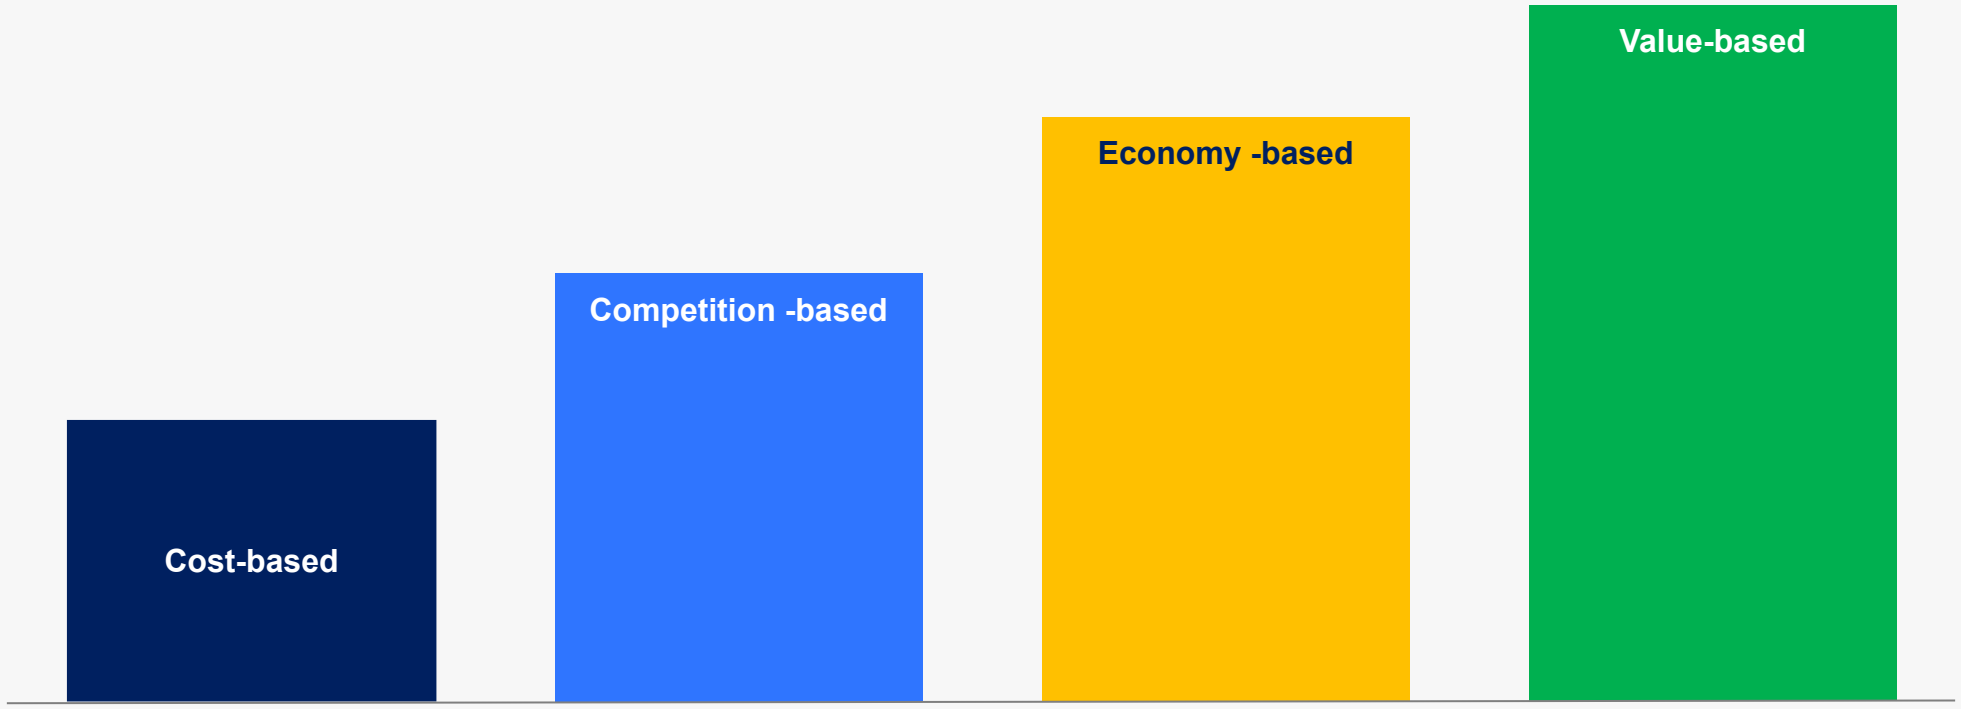
In situations such as market decline and overcapacity, the goal may be to select a price that will cover costs and permit the firm to remain in the market. In this case, survival may take a priority over profits, so this objective is considered temporary

Please see below a more comprehensive list of goals that you can select for your product

Current profit maximization	Current revenue maximization	Maximize quantity	Maximize profit margin
Quality leadership	Partial cost recovery	Survival	Status quo

The firm may seek price stabilization in order to avoid price wars and maintain a moderate but stable level of profit

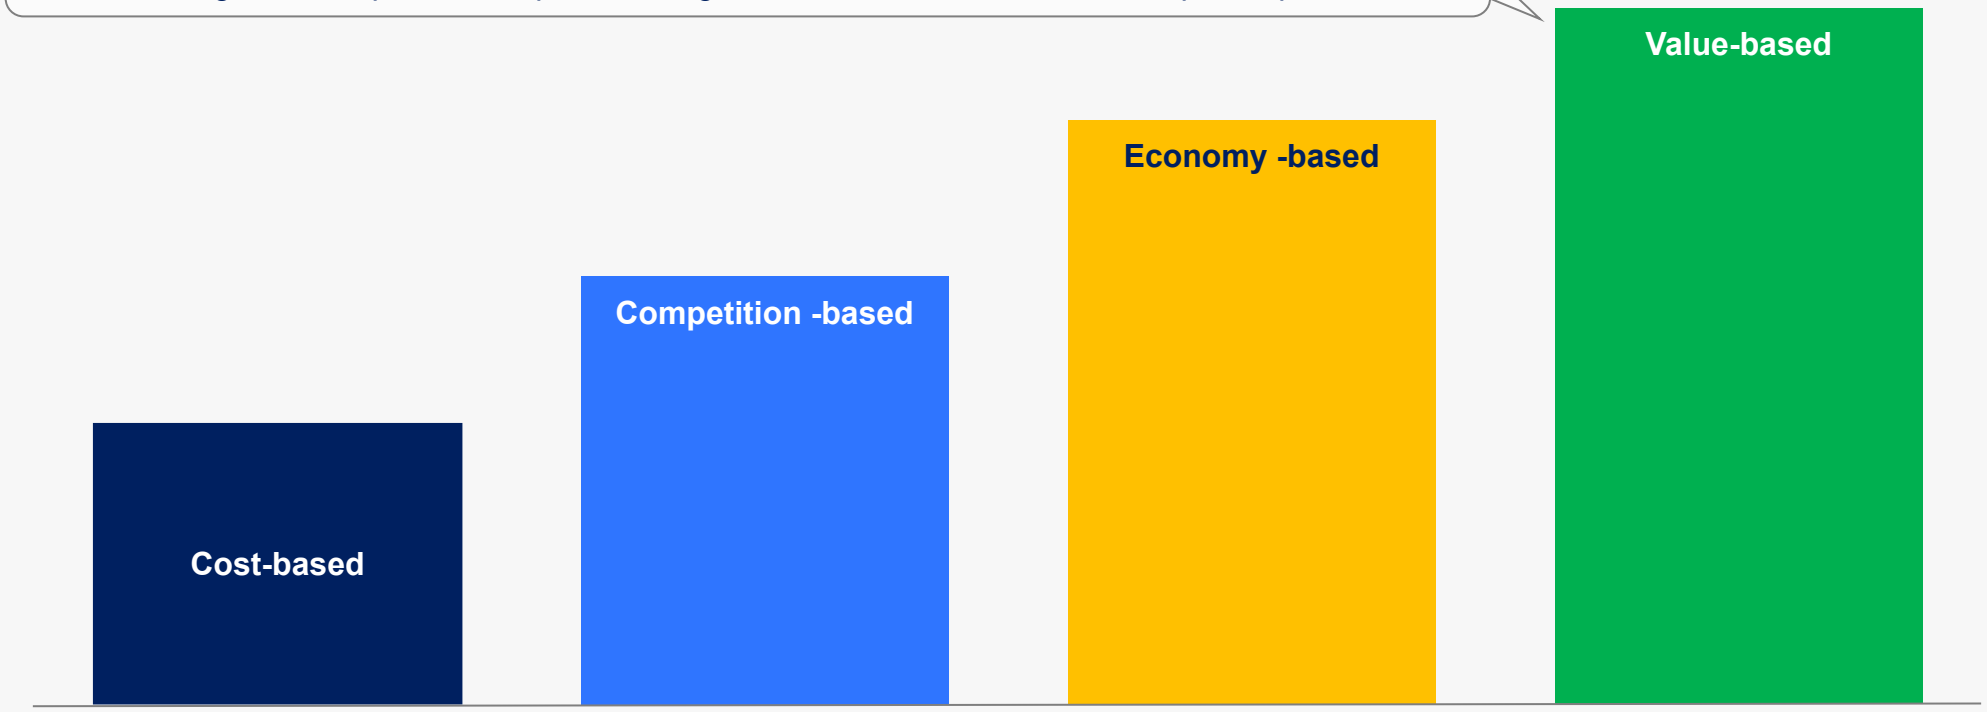
Once you set up your pricing goal, you can use the following methods to set up your list price



Price set up based on my cost	Price set up based on my competitors	Price set up based on the market	Price set up based on the value provided to the customer

Example of companies using the Value-Based method to set up their prices

The value-based method is typically associated with luxury goods. The car manufacturers Tesla and Ferrari are 2 good examples of companies using the value-based method to set up their prices



Price set up based on my cost	Price set up based on my competitors	Price set up based on the market	Price set up based on the value provided to the customer

Once you set up your list price you may also want to apply some discount

The normally quoted price to end users is known as the list price. This price is usually discounted for distribution channel members and some end users. There are several types of discounts:

- **Quantity discount** - offered to customers who purchase in large quantities.
- **Cumulative quantity discount** - a discount that increases as the cumulative quantity increases. Cumulative discounts may be offered to resellers who purchase large quantities over time but who do not wish to place large individual orders.
- **Seasonal discount** - based on the time that the purchase is made and designed to reduce seasonal variation in sales. For example, the travel industry offers much lower off-season rates. Such discounts do not have to be based on time of the year; they also can be based on day of the week or time of the day, such as pricing offered by long distance and wireless service providers.
- **Cash discount** - extended to customers who pay their bill before a specified date.
- **Trade discount** - a functional discount offered to channel members for performing their roles. For example, a trade discount may be offered to a small retailer who may not purchase in quantity but nonetheless performs the important retail function.
- **Promotional discount** - a short-term discounted price offered to stimulate sales.

Agenda

Step 1: Increase your Pricing background knowledge

- Why Pricing is critical?
- Key figures to know
- Key issues caused by ineffective Pricing management
- Root causes of pricing issues
- Estimated benefits of a Pricing management project
- Key consulting firms providing Pricing Management services
- Key questions Senior executives need to answer

Step 2: Define the pricing maturity level of your business

1. Create a pricing maturity model
2. Identify your current pricing maturity level
3. Define your target pricing maturity level
4. Design a roadmap to go from your current state to your target state

Step 3: Define your Pricing Strategy

1. Set up your Pricing Goal
2. Define key methods to reach your Goal and set up your list price
3. Apply discount to your list price

Step 4: Make sure you avoid price war

Additional reusable Powerpoint templates

How to escape a price war?

In order to escape the Red Ocean (price war), Blue Ocean suggests 4 steps: ERRC

E	Eliminate
R	Reduce
R	Raise
C	Create

How to escape a price war?

Here are the samples of what some companies do:

BestBuy	BestBuy eliminates depos for the supply chain. Instead of having lots of trucks to deliver from warehouses to small stores, BestBuy always build their stores in suburbs (where lands are cheaper) and merges their warehouse together with the store. As the result, minimum transportation/logistics cost from depo warehouses to store
Nintendo Wii	Nintendo Wii eliminates the super extra excellent graphic processor that Playstation-Xbox have been competing for. Nintendo realizes there is a market of people who do not really care about detail graphics at all. As the result, they decided to minimized research cost for graphic processor
Netflix vs Blockbuster	Why pay so much for shop rental and electricity when you have the internet. Netflix eliminates stores and reduces operational cost by moving a physical shop to an online shopfront. With this Netflix can operate anywhere
AirAsia	AirAsia eliminates free food on airplanes and seat number. AirAsia realizes that some people do not mind to not eat during flights. This really reduces the cost per passenger which results in cheap airplane ticket

Why there are no winners in a price war other than the customer?

- In a price war, where competitors with similar products compete for customers by having the lowest price, the only person that wins is the customer
- When allowing your sales staff to use price as their main tool to meet quotas for the month, week, or even year, you, as the executive, are actually making it harder for them to achieve the company's goals. When competing on price alone, your customers will quickly realize that all they have to do is signify that some other company's pricing is just a little bit better, and your prices will fall
- Not only will your profit shrink, but there is also a good chance that if your sales team doesn't have a bottom price range, the customers will manage to convince them that the only way to get the sale (which salesmen see as their #1 priority) is to dip below cost. Customer loyalty and all those other things the customer will promise your salespeople once that below cost sale happens will disappear the moment your competitor decides it is going to keep the war going
- So, playing the price war is a lose-lose situation for you, your brand, and your sales team, because your sales numbers may go up but your revenues will go down. You might even have happy customers – happy customers that will happily jump ship to your competitor with a lower price. Essentially, price wars are a no win situation, especially if you want to be at the top of your field
